```python
result = []
current_string = []
current_depth = 0
for c in paren_string:
    if c == '(':
        current_depth += 1
        current_string.append(c)
    elif c == ')':
        current_depth -= 1
        current_string.append(c)
        if current_depth == 0:
            result.append(''.join(current_string))
            current_string.clear()
return result
```
